The CABTEQ S-250 is the perfect assembly aide for pressing of carcass furniture. The press has a wide range of applications, whether in furniture production, object and shop fitting, or in industrial special production. The basic machine is available in different versions for various carcass dimensions.

**For the ambitious carcass assembly.**

**Our CABTEQ S-250.**

The CABTEQ S-250 is the perfect assembly aide for pressing of carcass furniture. The press has a wide range of applications, whether in furniture production, object and shop fitting, or in industrial special production. The basic machine is available in different versions for various carcass dimensions.

**The advantages at a glance**

- No positioning of the pressing elements required
- All-over pressing for best quality in the carcass assembly
- Pressing surfaces with tolerance compensation, thanks to that compensation of workpiece tolerances and absolutely tight carcasses
- Highly stiff pressure unit, absolute rectangularity of the carcasses
- Additional equipment for an ergonomic operation

Technical data

Workpiece data

Carcass measures
- Carcass length: 250 – 2,500 mm
- Carcass width: 250 – 700 mm
- Carcass height: 150 – 1,400 mm

Press capacity
- Vertical: max. 12 – 18 kN
- Horizontal: max. 12 – 18 kN

Positioning speed
- Rapid speed: 50 mm/s
- Pressing speed: 25 mm/s

Working height: 300 mm

Weight: ca. 2.2 t

Required space
- Length: 4,000 mm
- Depth: 750 mm
- Height: 2,300 mm
- Required room height: 2,500 mm

Intuitive operation: Operation is simple and doesn’t require prior knowledge. You only have to place the carcass into the clamp and press the start button. This will start the press process. Assemble, connect and start.

Pressing surfaces with tolerance compensation: The pressing lamellas work as a unit; they are placed on rubbers and suspended. Pressure is very evenly distributed due to the fact that the pressing lamellas simultaneously impinge on the carcass.

Movable pre-plugging station: The pre-plugging station allows a simple assembly of the carcasses at working height of the press.

Manuel carcass erecting device: The carcass erector is used for erecting and transporting mounted carcasses.

For the ambitious carcass assembly.

CABTEQ S-250 – The press has a wide range of applications, whether in furniture production, object and shop fitting, or in industrial special production.

- In addition, the CABTEQ has two speeds. One approaching speed (rapid speed) and a pressing speed.

- The lamellas run from their starting position towards the pressing position shortly in front of the carcass by pressing the button for rapid speed. Then it is switched to pressing speed.

- The rapid speed enables more pressed carcasses per shift.

- The press forces can variably be adjusted by button depending on the carcass type.

- The carcasses are pressed centrally.
