MEASURING WORKSTATION

MEASURING WORKSTATION

The electronic measuring workstation is for quick and simple dimensional control of flat panel work pieces. Simply place a panel on the table and use the manually operated touch-probe to “feel” the length, width, thickness, hole location and depth, radius, and any other measurement desired on the flat panel work piece, up to 50 mm thickness. The workstation will also check for out-of-square work pieces and the easy to read display provides the exact distance of your measurement within 0.1 mm.

Workstation will measure:

- panel dimension length and width
- distance between hole centers
- depth of vertical and horizontal holes
- dimensions of grooves on panels
- profiles on shaped panels
- radius on round work pieces
