

KENTWOOD/RANDOM SCRAPING MACHINE

One of the strongest market trends in flooring today is the look of hand-scraped wood floors. To get the random patterns consumers demand, flooring manufacturers must do just that - scrape by hand.

The introduction of the Random Scraping Machine camouflages the effect, making it difficult to tell whether the floor has been hand scraped or a machine has created random patterns in its surface.

Kentwood offers the best in quality, craftsmanship, and value for today's modern woodworker.

Backed by industry leading service and support, Stiles Machinery offers you the best in value for optimum results.

Features

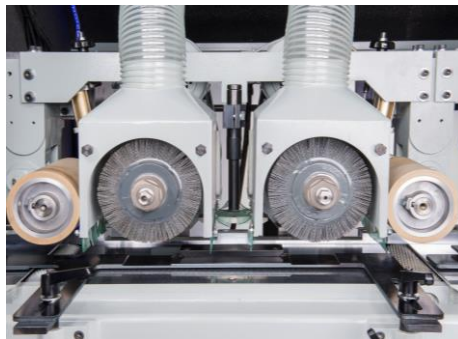

- Heavy duty construction
- Low utility requirements
- Multiple denibbing brushes included
- Chrome table plates
- No rotating tools
- Feed speeds up to 30 M/min (100 ft/min)
- Siemens control system

Advantage

- Produce smooth and chatter scrapes
- Create controlled scrape patterns with same random distressed effects achieved by hand
- Pneumatically actuated jumb knife features to produce divots
- No repeating knife marks
- Fully adjustable tilting tool actuators – best random look distressing
- Chrome table surface for long lasting performance
